- 2012 – Bachelor of Information Technology at Newcastle University.

Employment history

My time with the ACT Government primarily involved working with a team of colleagues to develop bespoke line-of-business web applications used across government. The most prominent was an application used by teachers and Department of Education staff.

I started working at Xero as a developer on their Payroll system. Xero is cloud-native accounting SaaS software. I later transferred into the Data Reliability Engineering team while simultaneously being promoted to the role of Senior Software Developer. My current role involves writing code, system design, interviewing candidates, mentoring, and working effectively with colleagues across the broader business to get things done.
